Telephone: 020 8640 3888

Structural Steel Work

We undertake all types of steel work from supply of singular beams to installation of complex steel structures.

Gates, Railings and Balustrade

As well as being able to supply metalwork to standard designs we always welcome customers own ideas and help transform them into reality.

Fire Escapes & Staircases

Either just a small access staircase to full flights of stairs or a fire escapes we can ensure your requirements are met, from a standard commercial design to a more decorative feature.

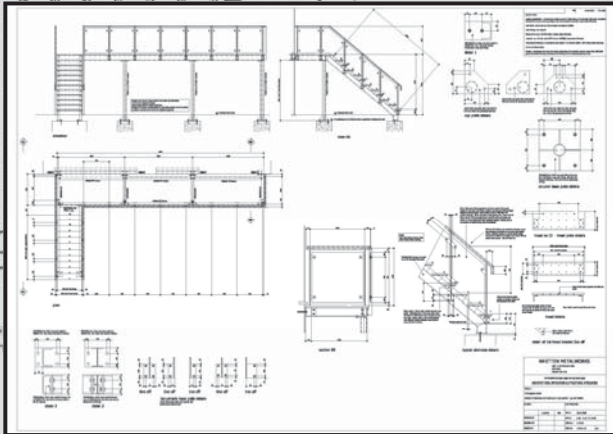

Security

Security Fencing & Gates, either bespoke made with anti-intruder devices or a standard palisade type system. Whatever your needs & budget, we can design & install to your requirements.

Architectural Metalwork

Bespoke designed gates & railings for either residential or commercial uses, with countless options with different components something that is unique can be fabricated and installed in weeks.

From Concept to Reality

We can from concept drawing and artists impressions transform ideas into workable and practical reality

See drawing no 1055-01-04 & 05 for fabrication details.

Working Drawings

We will, if required, provide full working drawings by our team of experienced draughtsmen for approval which shows all aspects of the proposed items.

Once approval is received the drawings go into our works for fabrication with all aspects throughout fabrication to installation project managed to completion.

Installations

Once fabricated we supply a full fitting service so you the customer has complete peace of mind as your ideas become reality.

Our fitting teams have over 20 years of experience and observe all health & safety guidelines so you can rest assured your installation will go safely & easily.

Health & Safety

Whitten Metalworks have a fully compliant Health and Safety Policy and employ professional Health & Safety Consultants to help us maintain our policy to ensure we are fully up to date. Our staff are trained in all operations and supplied with appropriate equipment to carry out all operations as safely as possible as well as being fully coded welders in MIG, TIG & ARC welding.

We are fully insured up to £5,000,000 Public Liability and up to £10,000,000 Employers Liability.

WHITTEN METALWORKS

CHECK BY:- DRG No:- 1055-01-03

Previous Works

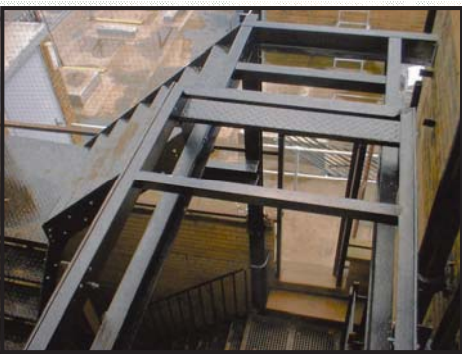

Whitten Metalworks

Bespoke Ornate Gates

This large ornate gate included hand-forged scrollwork completed in our workshops, The gate was fabricated from drawings of an existing gate on site

Installed 2007, Wentworth, Surrey

Whitten Metalworks

Structural Steel Work & Staircase

This staircase required a full supporting structure which Whitten Metalworks was happy to undertake as well, The staircase was then fixed to the structure and finished off with a full steel balustrade

Installed 2007, Park Royal, North London

Whitten Metalworks

Security Gates

Security is always a main concern, These bespoke security gates were fitted as part of a large project that also included galvanised fire escapes and structural restoration

Installed 2007, Norwood, South London

Whitten Metalworks

Gates & Railings

As seen here we are not just limited to large structural or commercial steelwork, we can fabricate bespoke architectural gates & railings, This gate was part of matching railings that were also fabricated by Whitten Metalworks

Installed 2005, Kensington, West London

Previous Works

Whitten Metalworks

Railings and Balustrade

These ramp balustrades were part of a larger project with matching staircases and internal handrails. Most were galvanised and finished with a polyester powder coat

Installed 2007, Park Royal, North London

Whitten Metalworks

Structural Steel Work & Balustrade

This large scale work incorporates a full Polyester Powder Coated landing with support posts and balustrade. Again part of a larger project including railing, handrail & entrance canopies

Installed 2006, Croydon, Surrey

Whitten Metalworks

Structural Steelwork

Full structural framed projects can be fully detailed, fabricated and installed as shown by this new building erected by Whitten Metalworks. Staircases and handrail were also included in this project

Installed 2008, Mitcham, Surrey

Whitten Metalworks

Fire Escapes

This residential staircase was designed, fabricated and installed to allow access to a first floor flat, complete with support posts, landing and balustrade

Installed 2007, Chessington, Surrey

Need Palisade Fencing in a hurry? Whitten Metalworks subsidiary Steel Fencing UK Ltd stock palisade fencing at various heights, if we don't have stock we are sure we can get it for when you need it, We are also happy to fabricate gates to any widths required to match your fencing.

The UltraFENCE™ Palisade Fencing system is the first complete cold rolled security fencing system. Whilst still exceeding the requirements of BS1722 Pt12: 2006 it is lighter, Stronger and more economical than conventional palisade fencing systems, Either a Galvanised or Polyester Powder Coated the systems consists of three rolled components.

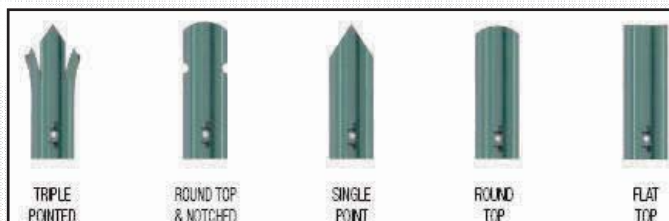

UltraPALE™ is a new concept in steel palisade fencing; the unique design is a result of extensive research and testing.

This lighter yet stronger product incorporates a unique patented bolt head protection which eliminates the opportunity to breach the fence by removing the heads of fixing bolts with a chisel.

The edges of the profile are finished with a neat return edge that provides further strength and safety along the length of the pale making it ideal for use around schools etc.

Pales can be supplied with a selection of heads as shown below which can be used with our fencing system.

UltraRAIL™ has been developed using cold rolled technology and extensive testing, resulting in a unique lightweight rail that is both stronger and lighter than existing standard 45x45 or 50x50mm rails.

The aesthetic design and strength of the new profile offers many advantages:

- Reduced sag as seen on standard rails
- Need for 'Anti-sag legs' eliminated
- Reduced risk of Anti-vandal fixings being tampered with
- Standard Fish plate connections
- Security features in the form of Anti-Grab tags and sloping top to discourage intruders from using the rail to assist climbing. NB: UltraRAIL™ are supplied without Anti-Grab tags when round top & notched pales are specified.

UltraPOST™ is a technological break through in fence post design which has again resulted in a unique lightweight product that out performs the standard 102x44 hot rolled steel joists currently used in the palisade market

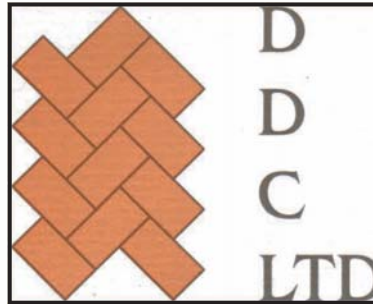

UltraPOST™ aesthetic design maintains the appearance of standard posts but offers many advantages

- Slotted to fit fish plates
- Pierced at bottom of post to key into concrete
- Lightweight construction for ease of handling without loss of strength

Clients

We are happy to have successfully completed work for the following clients, we are also delighted to have many happy smaller builders and residential customers.

Whitten Metalworks has also undertaken work for the following companies

Ranns Construction
Guildcrest Constructions Ltd
Acorn Groundwork Ltd
Mandeville Estates
